**Selection & Specification Data**

**Generic Type**
A water-based intumescent coating that consists of a vinyl acetate resin.

**Description**

**Features**
- Certified to ASTM E119
- Decorative aesthetic coating - provides a hard, durable, architectural finish.
- Well suited for residential and commercial applications
- Space saving - ideal for applications when additional layers of gypsum cannot be installed
- Compatible with most topcoats (though not required)
- Thin film coating - offers an economical solution to alternative fireproofing
- Low VOC, LEED compliant
- Easy repair - If damaged, product can be patched easily

**Color**
White

**Finish**
Smooth

**Primer**
Gypsum: Not required
Wood: Recommended but not required

**Topcoat**
For interior conditioned space, topcoating is not required but may be applied for aesthetic purposes.

Product must be topcoated if there are environmental exposure requirements. Refer to FlameOFF Coatings, Inc. technical support.

Intumescent coating must be applied to the required DFT and fully cured before topcoat is applied.

**Thickness Per Coat**
Recommended 20-35 Mils WFT

*Range: 15-45 Mils WFT. Maximum thickness per coat depends upon applicator experience, substrate, and job site conditions.

**Solids Content**
By Volume 71%

**Theoretical Coverage Rates**
1075 sq ft/gallon at 1 mil (1002 m / at 25 microns)
36 sq ft/gallon at 30 mils (3.3 2 m / at 750 microns)

**VOC Values**
As Supplied 0.06 lbs/gal (7 g/l)

**Testing / Certification**

**Listing**
This product has been tested in accordance with ASTM E119 to UL 263 standards. It meets the requirements of IBC/NFPA Building Codes.

- ASTM E119: 2 hours
- ASTM E84: Class A

**Required DFT**

*ASTM E119 1 and 2 hour ratings
**ASTM E84 Class A flame spread and smoke development rating

**Packaging, Handling & Storage**

- **Sheel Life**: 12 Months
  - Shelf life when kept at recommended storage conditions and in original unopened containers.

- **Shipping Weight**: 64 lbs per 5 gal pail

- **Flash Point**: (Setaflash) 93°F (30°C)

- **Storage**: Store indoors in a dry environment between 45°F and 105°F (7°C and 40°C)

- **Packaging**: 5 Gal

 FlameOFF Coatings, Inc. owns and certifies all data in this document. This document may not be altered by anyone other than FlameOFF Coatings, Inc.

The data and suggested formulations in this bulletin are based on information believed to be reliable and are offered solely for evaluation, investigation and verification of numerous factors affecting results. FlameOFF Coatings, Inc. products are sold with the understanding the purchasers will make their own tests to determine the suitability of these products for the particular use. We assume no liability or responsibility for any damage to person or property resulting from or incident to the use of our products. Statements concerning the use of FlameOFF Coatings, Inc. products are not be construed as recommending the infringement of any patent, and no liability for infringement arising out of any such use is assumed.
Application Equipment Guidelines

General equipment guidelines are given below, and may need to be modified depending on individual job site conditions. Contact FlameOFF Coatings with any questions.

Airless Spray

- Use 1.0 gal. per minute electric airless (minimum) to provide an operating pressure of 3,000 p.s.i. (140 kg/cm²).
- **Remove rock catcher from siphon tube.**

Spray Gun

- Contractor Gun (with filter removed) or equivalent

Spray Tips

- 0.021" - 0.025"

Fan Size

- 4"-10" (depending on section being sprayed)

Hose Length

- 50' (15 m) maximum

Material Hose

- 1/2" I.D.

** Listed here are general equipment guidelines for the application of this product. Job site conditions may require modifications to these guidelines to achieve the desired results.**

Mixing & Thinning

- Thinning: DO NOT THIN or alter in any way.
- Mixer: Use 1/2" electric or air driven drill with a slotted paddle mixer (300 rpm under load)
- Mixing: Product must be mixed using a 1/2" electric air driven drill with a slotted paddle or Jiffy mixer blade. Mix material for a minimum of 5 minutes to achieve the necessary texture required before spraying.

Curing times are dependent upon temperature, ventilation, and humidity. Lower temperatures will slow down the curing process, higher temperatures will speed up the curing process. Additional ventilation (add fan) may expedite curing process. For optimum curing, it is recommended to apply coats at 20-45 mls wet per coat. Material is ready to be topcoated when an average Shore D hardness of 70 is achieved.

Application Procedures

General

- Product may be applied by brush or spray application.
- Do not apply with a roller. Spray application is recommended for the optimum appearance.

Airless Spray

- A single coat built up with a number of quick passes allows greater control over quantities, thickness and finish.
- **Note - In most conditions, it is advantageous to apply two thin coats rather than one thick coat.**

Application Rates

- Spray: 20-35 Mils Wet Film Thickness
- Brush: 10 Mils Wet Film Thickness
- **7 hour recoat time. See Application Manual.**

Wet Film Thickness

- Frequent thickness measurements with a wet film gauge are recommended during the application process to ensure uniform thickness.

Cleanup & Safety

- **Clean up:** Flush pump, gun, tips, hoses and mixer with hot water at least once per day.
- Safety: Follow all safety precautions on the product Material Safety Data Sheet.
- Overspray: All adjacent and finished surfaces shall be protected from damage and overspray.

Maintenance

General

- If coating becomes damaged, rebuild the required thickness by spray or brush. When dry, smooth and finished, topcoat may be applied. The repair area must follow all surface preparation requirements before reapplying the coating. The coating must be built back to the original thickness.
